1091. Shortest Path in Binary Matrix

Solved Medium

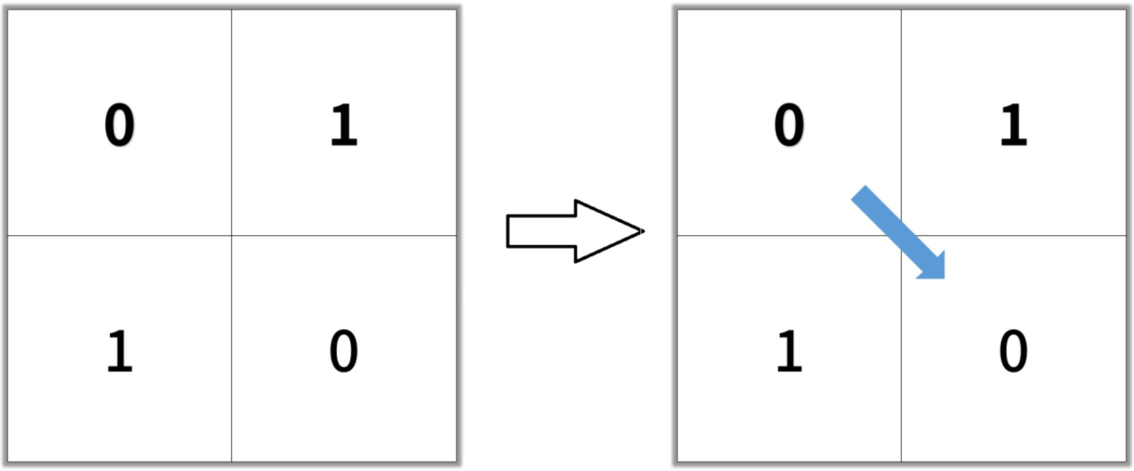
Given an n x n binary matrix grid, return *the length of the shortest **clear path** in the matrix*. If there is no clear path, return -1.

A **clear path** in a binary matrix is a path from the **top-left** cell (i.e., (0, 0)) to the **bottom-right** cell (i.e., (n - 1, n - 1)) such that:

- All the visited cells of the path are 0.
- All the adjacent cells of the path are **8-directionally** connected (i.e., they are different and they share an edge or a corner).

The **length of a clear path** is the number of visited cells of this path.

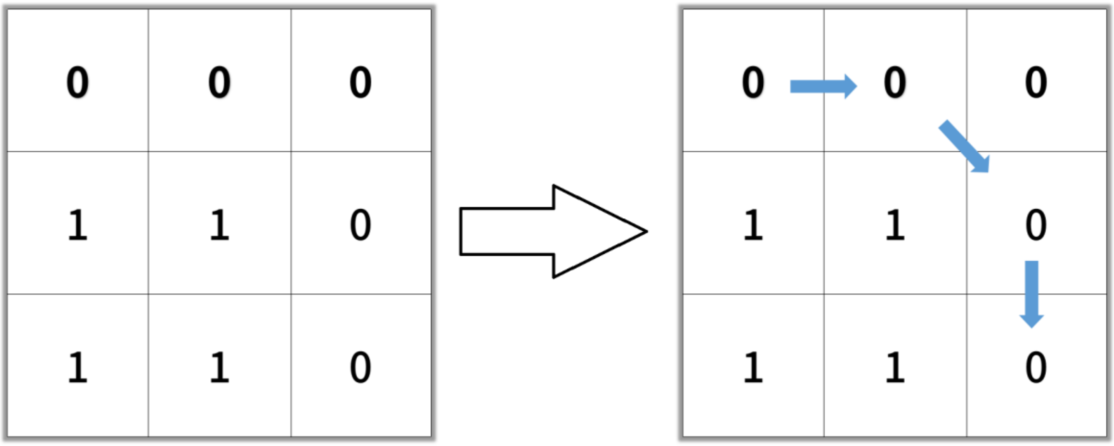
Example 1:



Input: grid = [[0,1],[1,0]]

Output: 2

Example 2:



Input: grid = [[0,0,0],[1,1,0],[1,1,0]]

Output: 4

Example 3:

Input: grid = [[1,0,0],[1,1,0],[1,1,0]]

Output: -1
