

200. Number of Islands

Solved

Medium

Given an $m \times n$ 2D binary grid `grid` which represents a map of '1's (land) and '0's (water), return *the number of islands*.

An **island** is surrounded by water and is formed by connecting adjacent lands horizontally or vertically. You may assume all four edges of the grid are all surrounded by water.

Example 1:

Input: `grid = [`

`["1","1","1","1","0"],`

`["1","1","0","1","0"],`

`["1","1","0","0","0"],`

`["0","0","0","0","0"]`

`]`

Output: 1

Example 2:

Input: `grid = [`

`["1","1","0","0","0"],`

`["1","1","0","0","0"],`

`["0","0","1","0","0"],`

`["0","0","0","1","1"]`

`]`

Output: 3
