

## 3898. Find the Degree of Each Vertex

Solve

Easy

You are given a 2D integer array matrix of size  $n \times n$  representing the adjacency matrix of an undirected graph with  $n$  vertices labeled from 0 to  $n - 1$ .

- $\text{matrix}[i][j] = 1$  indicates that there is an edge between vertices  $i$  and  $j$ .
- $\text{matrix}[i][j] = 0$  indicates that there is no edge between vertices  $i$  and  $j$ .

The **degree** of a vertex is the number of edges connected to it.

Return an integer array ans of size  $n$  where  $\text{ans}[i]$  represents the degree of vertex  $i$ .

**Example 1:**

**Input:** matrix =  $[[0,1,1],[1,0,1],[1,1,0]]$

**Output:**  $[2,2,2]$

**Explanation:**

- Vertex 0 is connected to vertices 1 and 2, so its degree is 2.
- Vertex 1 is connected to vertices 0 and 2, so its degree is 2.
- Vertex 2 is connected to vertices 0 and 1, so its degree is 2.

Thus, the answer is  $[2, 2, 2]$ .

**Example 2:**

**Input:** matrix = `[[0,1,0],[1,0,0],[0,0,0]]`

**Output:** `[1,1,0]`

**Explanation:**

- Vertex 0 is connected to vertex 1, so its degree is 1.
- Vertex 1 is connected to vertex 0, so its degree is 1.
- Vertex 2 is not connected to any vertex, so its degree is 0.

Thus, the answer is `[1, 1, 0]`.

**Example 3:**

**Input:** matrix = `[[0]]`

**Output:** `[0]`

**Explanation:**

There is only one vertex and it has no edges connected to it. Thus, the answer is `[0]`.

**Constraints:**

- $1 \leq n == \text{matrix.length} == \text{matrix}[i].\text{length} \leq 100$
- $\text{matrix}[i][i] == 0$
- $\text{matrix}[i][j]$  is either 0 or 1
- $\text{matrix}[i][j] == \text{matrix}[j][i]$
